

Fiber Growing Solutions

A sustainable,
cost-effective and
biodegradable
cannabis growing
alternative.

Cannabis seeds are often started in much smaller containers to help control moisture. **Avoiding root shock when transplanting** is critical to a healthy adult plant.

Fiber containers provide an **optimal solution for propagation**, as the entire pot can be planted safely into a larger container without disturbing the root system. The composition of the container will decompose over time, **allowing the roots to naturally expand** in their new environment without any negative effects to the roots.

4.00 FiberGrow Standard Round Pot

4.00 10-Count FiberGrow Carry Tray

3.50 FiberGrow Garden Pak Strip

3.50 EcoGrow Round Pot (Organic)

Features & Benefits

- Ideal for propagation
- Automation friendly
- Saves time on transplanting
- Durable for hardy growing cycles
- Zero waste - no recycling required
- Numerous sizes and styles available
- Certified for Organic Farming (EcoGrow®) void of contaminants
